## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102(e) that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1, 2, 4, 6-8, 10, 12, 13, 15, 16, 17, 19, and 21 are rejected under 35 U.S.C. 102(e) as being anticipated by Michels et al (U.S 6453358), hereinafter referred to as Michels.

Re claims 1, 7, 13, and 16, Michels discloses a network switch with a lookup table (*a network switch comprising an address resolution (ARL) table having a plurality of entries*, abstract), a first stage memory that does not contain the entire lookup table (*a ARL cache having a subset of entries of said plurality of entries of said ARL table*, column 6, lines 5-6), and a search engine with a first search engine (figure 3, element 66) connected to a stage 1 memory (figure 3, element 70) and a second search engine (figure 3, element 68) connected to a primary memory wherein each search engine performs a predetermined number of iteration (*a search engine configured to first search said ARL*

*cache in a first number of search cycles and then search said ARL table in a second number of search cycles based on search results of said ARL cache, said search engine connected to said ARL table and said ARL cache, figure 3).*

Re claims 2, 8, and 17, Michels discloses a search engine with a binary search engine (*a search stage zero segment, figure 3, element 66*) connected to a stage 1 memory (*cache, figure 3, element 70*) and a binary engine (*a search stage one segment, figure 3, element 68*) connected to a primary memory (*table, figure 3, element 58*) (*a search engine comprising a search stage zero segment configured to search said cache in said first number of search cycles, said search stage zero segment connected to said cache, and a search stage one segment configured to search said table in a second number of search cycles based on search results of said cache, said search stage one segment connected to said search stage zero segment and said table, column 3, lines 9-16; figure 3; column 5, lines 33-36*).

Re claims 4, 6, 10, 12, 15, 19, and 21, Michels discloses that the binary search engine 66 performs the first eight iterations of the search and binary search engine 68 performs the last eight iterations (*column 6, lines 2-5, the first number of search cycles used to search the cache is equal to the second number of search cycles used to search the table*).

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2662

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 3, 5, 9, 11, 14, 18, and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Michels.

Re claims 3, 5, 9, 11, 14, 18, and 20, Michels discloses all of the limitations of the base claim, but fails to disclose that the first number of search cycles used to search the cache is less than the second number of search cycles used to search the table. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify Michels to have different number of search cycles as suggested by Mitchels (column 6, lines 22-26) to provide a high-speed network switching device that would quickly and efficiently search through address lookup tables without wasted memory cycles of a search engine.

#### *Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
  - US Patent (6697873) to Yik et al.
  - US Patent (6009423) to Moran
